# Eureka Math ${ }^{\text {m }}$ Tips for Parents 

## Multi-Digit Multiplication and Division

## Thinking mathematically is hard but important work!

| Factor Pairs for 35 |  |
| :---: | :---: |
| 1 | 35 |
| 5 | 7 |

Students will learn how to determine if a number is prime or composite by looking for factor pairs in the number.

## What Came Before this

Module: We extended place value work, practicing using metric measurements for length, mass and capacity.

## What Comes After this

Module: We will begin learning geometric terms, measuring angles, and learning how to find the measure of an unknown angle.

## Key Words to Know

Number Properties
Associative Property: $3 \times(4 \times 8)=(3 \times 4) \times 8$
Distributive Property: $6 \times(3+5)=(6 \times 3)+(6 \times 5)$ Partial Product: $24 \times 6=(20 \times 6)+(4 \times 6)$

Mathematical Terms
Prime Number - positive integer only having factors of one and itself
Composite Number - positive integer having three or more factors
Divisor - the number by which another number is divided Remainder - the number left over when one integer is divided by another
Algorithm - steps for base ten computations with the four operations
Area - the amount of twodimensional space in a bounded region Perimeter - length of a continuous line around a geometric figure

How you can help at home:

- Become familiar with the area model, a different method of multiplying than you may have learned
- Continue to review the place value system with your student
- Discuss mathematical patterns, such as $5 \times 9$, $5 \times 90,50 \times 90,50 \times$ 900 , etc.

## Key Common Core Standards:

- Use the four operations $(+,-, x, \div)$ with whole numbers to solve problems
- Gain familiarity with factors and multiples
- Use place value understanding and properties of operations to perform multi-digit arithmetic
- Solve problems involving measurement and conversion of measurements from a larger unit to a smaller unit

## Grade 4

Spotlight on Math Models:

Area Models
You will often see this mathematical
representation in $A$
Story of Units.

## A Story of Units has several key mathematical "models" that will be used throughout a student's elementary years.

Students began in earlier grades to build arrays, showing multiplication and division as a series of rows and columns. In $4^{\text {th }}$ grade, they learn to show these types of problems as an area model.

As students move through the grades, the area model will be a powerful tool that can take them all the way into algebra and beyond. One of the goals in A Story of Units is to first give students concrete experiences with mathematical concepts, and then build slowly toward more abstract representations of those concepts. The area model is a tool that helps students to make that important leap.

Sample from the curriculum:

Use an area model to represent $50 \times 40$.
(Example taken from Lesson 6, Module 3)
